Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1918 Excerpt: .strange characteristic of magnetism is that it may be made to exist to any considerable extent in only a comparatively few materials. These are called ferro-magnetic materials, and in this class may be placed the metals iron and nickel, and the minerals magnetite and franklynite. No satisfactory explanation can be given to this peculiarity, as it is not completely understood. For the purpose of this discussion, it is sufficient to say that magnetism is probably due to an arrangement of the atoms or molecules into forms that can be assumed by only a comparatively few materials. It is not due to a chemical change, and the magnetic properties of a material can no more be determined chemically than can color or hardness. In order to determine whether or not gravity concentration of any material is possible, specific gravity determinations may be made, and likewise, in order...
